Assignment 5

1. What strategies are crucial for converting academic research into practical societal benefits?

a. Establishing obstacles to innovation
b. Partnering with industries to link research with real-world applications
c. Keeping research results confidential
d. Engaging in rivalry with industries to demonstrate academic dominance

Answer: b. Partnering with industries to link research with real-world applications

2. Why are investors often reluctant to invest in healthcare product startups?

a. High profit margins in the industry
b. Poor success rates of medical devices
c. Rapidly growing demand for medical devices
d. Shorter research and development cycles

Answer: b. Poor success rates of medical devices

3. What initial step is crucial for developing a successful design solution?

a. Identifying the problem and understanding functional requirements
b. Planning marketing campaigns and advertising strategies
c. Conducting employee training and managing resources
d. Securing Intellectual Property Rights and patents

Answer: a. Identifying the problem and understanding functional requirements

4. What role did telemedicine play in improving healthcare during global pandemics?

a. Increased healthcare costs without benefits
b. Reduced the strain on physical healthcare facilities
c. Created barriers for patient access to care
d. Complicated the delivery of medical services

Answer: b. Reduced the strain on physical healthcare facilities

5. What is the main purpose of pilot production in the development process?

a. Generating marketing and advertising content
b. Testing and adapting design features based on user feedback
c. Filing for patents before large-scale production
d. Conducting research in controlled lab environments

Answer: b. Testing and adapting design features based on user feedback

6. At which point in the innovation process should businesses prioritize securing Intellectual Property Rights (IPR) to protect their inventions?

a. During the initial idea conception
b. After developing a working prototype
c. Before commercializing the product
d. Once the product is widely available in the market

Answer: c. Before commercializing the product

7. Who is eligible to obtain licenses for Intellectual Property Rights (IPR)?

a. Start-ups only
b. Industry professionals only
c. Non-Governmental Organizations (NGOs) only
d. All of the above

Answer: d. All of the above

8. What does TRL stand for in the context of innovation and development?

a. Technology Readiness Levels
b. Transition and Research Limits
c. Technological Resource Level
d. Test and Reliability Levels

Answer: a. Technology Readiness Levels

9. What key aspect should be prioritized when developing a Proof of Concept (POC)?

a. Demonstrating functional feasibility
b. Implementing industrial techniques for scalability
c. Securing patent protection during initial stages
d. Brainstorming creative ideas without practical implementation

Answer: a. Demonstrating functional feasibility

10. What are the best practices for defining the functional requirements of a project?

a. Conducting thorough stakeholder interviews to gather insights
b. Ignoring end-user feedback and relying on assumptions
c. Prioritizing features based on developer convenience
d. Overlooking the project scope and timeline

Answer: c. Prioritizing features based on developer convenience
